Hmm, where to next?

Career Planner

Let's take a peek at my journey
Willem Touw

First up! Starting in May 2025, SHI!

Jr. IT Engineer Intern, at SHI International Corp

Some of my work thus far

- M365 Cloud automations
- Confluence AI CoPilot integration
- Custom Sprawl cleanup software development (full stack)

What I learned

- Collaboration
- Leadership
- Corporate Workflow

- Meetings, lots of 'em
- More in-depth SQL, PowerShell, Python, Java, and RPA

Introduction

And now.. this fall

M365 — Continuing development of the Sprawl Cleanup initiative!

Cloud RPA — Developing more RPA flows for the cloud team

Full-Stack — Foster the development of innovative solutions within the cloud infrastructure team.

Jr. Software Engineer at SHI International Corp
And after that?

That is tough to say! But after graduation, I would like:

1. Continue to pursue independent SW projects

2. Work as a SWE, and continue to develop solutions

3. Conduct more in depth research on AI and Quantum

Ok... and then?

Hm, I have no clue! The world will look much different by then

1 Will we even be working? Basic-Universal Income?

2 Will robots/AI take the role of SWE (likely)

3 Will we have AGI/ASI, and Quantum?

I realistically think that by 2030-2040 the world will drastically change at the current expected rate of technological development. For that reason, I am not sure what I will be doing by that time; hopefully, I will have a family and focus on that. :)

Luckily, there is a lot of time

So.. yea

Let's take our time and approach this one day at a time. 😊 We live in an incredible era, and I'd prefer not to concentrate solely on money or the "best" job. Instead, I aim to make a positive contribution to humanity and utilize my talents for the greater good.

That being said, in the long term, I would like to have a pizza oven, that would be a lot of fun. Thanks for reading!

Thank You
